

## CANTILEVER SHADE STRUCTURE

Patrons at this famous Hawaiian beach resort can relax in comfort by the beach under this Flexshade® Q\*14SP outdoor shade structure.

Not only can they enjoy the shade provided by this stylish white outdoor umbrella, they can also rest easy under the shelter of the Tedlar fabric, which blocks 100% of UV rays.

The pivot option multiplies the shade by 25% while still withstanding high wind loads.

The high strength steel is Triplex coated for protection against the sun and salt water spray. The treatment involves a superior three stage coating system combining hot zinc spray with Dulux Durrallloy® dual powdercoat.

Apart from this outdoor shade style, the Flexshade® range includes several other modular shade structures. Clients can choose from a range of designs: the Lotus, Tetra, Auto, Hypar, and the new Quad. Spans range from 2m to 15m.

Flexshade structures are manufactured to Tension Span's high quality standards with all stainless steel fasteners and carry a 10 year warranty.
